

Using “One Search” to find Online Journals

One Search is a “federated search engine”; it searches the ITB library catalogue and a range of online databases for academic journals at the same time.

To access it, go to the Library Home Page: <http://www.blanchlib.itb.ie/> . It is the first search box on the page:

One Search for e-Resources online and ITB Library Material :

[Advanced Search](#)
[Database List](#)
[Trial Databases](#)

To search, simply type the keyword of what you are looking for – for example **Child Psychology**

(Note: If you use Inverted commas “ ” around the keyword, it will search for where the exact phrase appears in the text of the article, i.e. side by side in the text rather paragraphs apart from each other)

When you click “search” a results page will appear showing books shelved in ITB library and Electronic resources available online:

3  **Child psychology: a handbook of contemporary issues**
by [Balter, Lawrence.](#); [Tamis-LeMonda, Catherine S.](#)
2006, 2nd ed.
Book: [ON SHELF. 155.4 BAL. Main shelves - level 2 \(+4 more\)](#)

You will need to refine your results down further to find specifically what you need. To do this, you use the refine tools on the left hand side of the screen: Click on the refinements you want to make:

You will need to limit your results to **Full Text** items online if you want to show only the results that ITB has full access to. It is also recommended that you choose Peer Reviewed items

You can also choose the type of material you want to use. Usually people choose Journal Articles. But sometimes it can be useful to also include conference proceedings

You can choose to limit the date range of the publications you wish to use. Enter the date limits in the boxes, or use the calendar icons to choose dates.

When you do a keyword search in One Search, everything related to it is included in the results unless you tell it otherwise. To narrow the results down to more specific areas, you need to use the "Subject Terms" refinement:

If you click on "More", it will open a panel where you can refine your results further by subject areas

You can exclude certain search terms by clicking on the red X beside the area. Browse through the list to limit it to your own specific requirements. After you have excluded what you don't need, click the "Apply" button on the top:

The results will be reduced to more specific targets, as per the refinements you chose.

135,510 results sorted by [relevance](#) 

Browse through the list of articles to see what is of interest to you. If you click on the “Preview” link, it will open a description of what the article is about:

The empirical base suggesting a link between prenatal maternal anxiety, stress or depression and cognitive, behavioral, and biological outcomes in the infant and child has increased dramatically in the past 10 years. In this review, we consider the relevance of prenatal maternal mood for child mental health practitioners; the empirical base for a likely causal impact of the link between prenatal anxiety, depression, or stress and child outcomes; the degree to which the available evidence is sufficient for informing or altering clinical practice; and the possible role of prenatal interventions for promoting child health and development. A selective review of PubMed, Cochrane Library and other sources was undertaken. Clinically significant links between maternal prenatal distress and child behavioral and cognitive outcomes have been reported; predictions to stress physiology, immunology, and neurodevelopment have been reported but the effect sizes and clinical significance is less clear. Several candidate mechanisms have been proposed, with some supporting evidence. Many behavioral treatments for prenatal maternal distress exist, but their application to promoting child health is largely unknown. Research on maternal prenatal distress is a good example of translational research and offers a strong paradigm for promoting interdisciplinary clinical research on child health and development.
